South American mahogany and epoxy resin. All wood on a Vicem hull and the keel, chine, sheer, frames and beams are coated with epoxy resin serving as a moisture barrier. The exterior of the hull and interior of the entire bilge and engine room area is further coated with a layer of E-glass cloth and epoxy resin that is finished with epoxy fairing compounds, epoxy primers, and polyurethane paint. Over 100 Vicem Yachts up to 92 feet have been built using this time-proven blend of modern and traditional construction methods
